Page 10

Fig. 006
Features:

- Proven technology
 - Solid plug made of stainless material
 - Solid stem made of stainless material
 - Solid seat made of stainless material
 - Stem with roll hardened thread
 - Burnished stem
 - High-tensile gland packing
 - Favourable zeta-values also for small nominal diameters
- In cast steel, forged steel and stainless steel:
- Bonnet top with threaded bushing
 - Pivot mounted bolts

Stop valve - straight through with flanges and gland seal (Grey cast iron, SG iron)

Fig. 306: Trim made of RG/MS:

CuZn35Ni3Mn2AlPb, CW710R code number 02

CuSn10-Cu, CC480K code number 03

(max. operating temperature: 180°C, code number acc. to DIN 86251)

Test:

• DN15-300 optional: German TA-Luft TÜV-Test-No. 922-9204866 (refer to page 16)

At high differential pressures a balancing plug is necessary!
(not possible at Fig. 306, observe max. differential pressure!)
(refer to page 13)

Selection of possible applications

Industry, power stations, flue gas purification plant, vapour facilities, recycling facilities, shipbuilding, general plant manufacturing
(other applications on request)

Selection of possible flow media

Steam, gases, liquids, etc.
(other flow media on request)

6	Packing ring	Pure graphite
7	Stud	25CrMo4, 1.7218
8	Hexagon nut	C35E, 1.1181
9	Gasket	Pure graphite (CrNi laminated with graphite)
10	Insert nuts	11SMn30+C, 1.0715+C

Information / restriction of technical rules need to be observed!

Operating instructions can be ordered by phone +49 (0)5207 / 994-0 or fax +49 (0)5207 / 994-158 or -159.

ARI-Valves of EN-JL1040 are not allowed to be operated in systems acc. to TRD 110.

A production allowance acc. to TRB 801 No. 45 exists

The engineer, designing a system or a plant, is responsible for the selection of the correct valve.

Face-to-face dimension ETE series 1 according to DIN EN 12982.

Butt weld ends according to DIN EN 12627 - 4.

Weld joint according to DIN EN 29692 code number 1.3.3.

The material used for ARI valves with butt weld ends are:

GP240GH+N, 1.0619+N acc. to DIN EN 10213-2,

P250GH, 1.0460 acc. to DIN EN 10222-2.

The material used for ARI valves with shoed ends (DN 65-200) P235GH according to DIN EN 10216-2.

Based on our experience we recommend electric welding process for connecting valves or strainers with tubes or with each other

Lime based electrodes with an appropriate composite material should be used as filler material for welding.

Gas welding should be avoided.

Because of the different material compositions and wall thickness of the steam traps and the pipe gas welding shall not be applied. Quenching cracks and coarse grain structure may develop..

Regulating plug
(for max. permissible ΔP refer to: Flow diagram)

Regulating plug with soft seal
Max. operating temperature 200°C at PTFE + 25% carbon
(for max. permissible ΔP refer to: Flow diagram)

Screw down non-return plug with re-setting spring - max. differential pressure, refer to table of pressure balancing plugs,
Set pressure 0,1 bar
(Design for special applications refer to page 14)
Flow values (Kvs and Zeta) refer to data sheet „Check valves“.

Plug with marginal seat

Valves with balancing plugs have to be installed with medium **flowing over the plug (3) as indicated by flow direction arrow on valve body.**

Working principles:

When the valve is closed, anticlockwise rotation of the hand wheel lifts the pilot plug (3.1) off the larger balancing plug (3).

This allows the medium to pass through the plug and equalizes the pressure of the medium under the plug (3). After the pressures have been equalized within the values stated in the table, the valve can be opened by turning the valve further with normal manual force.

Balancing plugs are fully effective only in closed systems.

The pressures of the medium on either side of the plug can not be equalized if the medium is discharged into open air.

A bypass line or some other arrangement is necessary if too much time is required for pressure equalization owing to the volume in the piping system.

ARI-stop valves with differential pressures exceeding the following pressures, have to be fitted with pressure balancing plugs

	DN	125	150	200	250	300	350	400	500
max. differential pressure (ΔP)	(bar)	25	21	14	9	6	4,5	3,5	1,5

Limit switch

Handwheel operated by impact force

100-150	260	8,9
200-400	300	11

Position indicator with locking device

Stem extension (please specify height in your order)

Flow direction

Hole and stem with a precise tolerance

Screw down non-return plug with re-setting spring and plug damper

In special applications, like high flow turbulences, stuffing box valves with damper should be used with execution „screw down non-return plug“:

- if stuffing box valves with loose plug are mounted directly by centrifuged pumps;
- behind pressure reduction stations;
- behind pipe elbows;
- in compact plants;
- if expansion joints are missing;
- if the pump is not mounted on a damper;
- if there is no flow stabilizing pipe dimension;
- if there is no start-up bypass line;
- when choosen valve diameter to large.

Working principle

The precise tolerance between stem and plug hole prevents an abrupt displacement of medium out of the plug.

Intermediate values for max. permissible operational pressures can be determined by linear interpolation of the given temperature / pressure chart.

* Studs and nuts made of A4-70 (at temperatures below -10°C)

Please indicate when ordering

- Figure-No.
- Nominal pressure
- Nominal diameter
- Special design / accessories

Example:

Figure 35.006; nominal pressure PN40; nominal diameter DN100; with regulating plug, position indicator with locking device..

 Dimensions in mm
 Weights in kg
 1 bar $\hat{=}$ 10⁵ Pa $\hat{=}$ 0,1 MPa
 Kvs in m³/h

Testing German „TA-Luft“ optional at DN15-300 (TÜV-Test-No. 922-9204866)

with not spring-loaded stuffing box

Grey cast iron and SG iron

Cast steel, Forged steel, Stainless steel
